## EX:NO: 01(a)

## MS-WORD EXERCISES

## DOCUMENT CREATION AND TEXT MANIPULATION

## AIM:

To create a document using MS-WORD and perform text manipulations with scientific notations.

## ALGORITHM:

Step 1: Start.
Step 2: Open a new document from the file menu and tyee a paragraph.
Step 3: Select the bullets and numbering from the hơé menu and apply to the paragraph.

Step 4: Select the font style and font size from the home menu and apply to the paragraph.
Step 5: Select the page number option from the insert menu and display the page to every page of the documentr:

Step 6: Select the paragraphand apply the left indent and right indent from home menu.

Step 7: Go to Insertmeau and select Symbols to insert the necessary symbols
Step 8: Savethefile.
Step 9: Stop.

## RESULT:

Thus the document creation and performing text manipulations with scientific notations were performed using MS-WORD.

## Do your self:

1. Type a leave letter and format this letter
2. Create a Bio data (Apply Bullets and numberings)
3. Type the following formulae using Scientific notation

$$
\begin{array}{ll}
{\left[\begin{array}{rrr|r}
3 & 4 & -2 & 15 \\
2 & -3 & -8 & 11 \\
5 & -2 & -3 & 16
\end{array}\right] .} & y=a x^{3}+b x^{2}+c x+d . \\
\bar{x}=\frac{1}{n} \sum_{j=1}^{n} x_{j} . & \int \tan (\pi x) d x=\frac{1}{\pi} \ln (|\sec (\pi x)|)+C . \\
(x+y)^{2} \neq x^{2}+y^{2} . & \lim _{x \rightarrow \infty} f(x)=a \\
y=a\left(\frac{x}{b}+c\right) . & |x|= \begin{cases}x & \text { for } x \geq 0 \\
-x \text { for } x<0\end{cases}
\end{array}
$$

4. Create a Greeting Card (Put page border and shadings wherever needed)
5. Create an advertisement for you company

## EX: NO: 01(b)

## TABLE CREATION AND FORMATTING

## AIM:

To create, format and convert a table in the MS-WORD.

## ALGORITHM:

Step 1: Start
Step 2: Open a blank document in MS-WORD.
Step 3: Click the insert menu and click the table option. Select the number of rows and columns to be created and then click ok.

Step 4: To insert rows, columns and cells in the tabletright click in the table and click insert option and click rows or columasencells.

Step 5: To delete rows, columns and cells in the table right click in the table and click delete option and click rows of columns or cells.

Step 6: To merge two cells in the table click the two cells and then right click and select merge option.

Step 7: To split a cell in the table, right click the cell and click split option.
Step 8: To convert text to table click insert menu and click table option and select "convert text totable option" and to convert table to text select "convert table to tex $\%$ " option from the layout menu.

Step 9: Stop.

## RESULT:

Thtus the creation, formatting and conversion of the table was performed in MS-WORD.

## Do your self:

1. Create a your Weekly schedule.(Apply all table formatting methods)
2. Create a table to maintain your details as Name, Roll Number, and a column for marks and under this column provide 5 columns to maintain 5 different marks, total, Average. Finally sort the table by names in descending order.

## EX: NO: 02

## MS-EXCEL <br> CHART CREATION- LINE, XY, BAR and PIE

## AIM:

To create chart-Line, XY, Bar and Pie charts for an employee using MSEXCEL.

## ALGORITHM:

Step 1: Start
Step 2: Open an excel spreadsheet and enter the employee number, name and basic pay.
Step 3: Calculate the Dearness Allowance (DA) Bouse Rent Allowance (HRA) and Provident Fund (PF) from the basiopay using the specific formula.

Step 4: Calculate the gross pay of an employee by adding the basic pay and the other allowances of the empleye.
Step 5: Calculate the net pay of an employee from the gross pay and PF of the employee.

Step 6: Then select theflelds in the spreadsheet and click the insert menu.
Step 7: Click the type of the chart to insert.
Step 8: Stop.

## RESULT:

Thus the creation of charts likes Line, XY, Bar and Pie using MS-EXCEL was performed.

## EX: NO: 03

## FLOW CHART

## AIM:

To prepare a flowchart in MS-WORD to find the sum of first 100 natural numbers.

## ALGORITHM:

Step 1: Start
Step 2: Open a new document and then click the "insert" menu.
Step 3: Then click the shapes option and then click the different symbols in the flowchart option to draw a flowchart.

Step 4: Stop.

## RESULT:

Thus the flowchart to find the sum of 100 natural numbers was drawn in MS-WORD.

## Do your self:

1. Draw flow chart for the following
a. Addifion of 2 numbers
b. Biggest among three numbers
a. Swapping of two variables without using temporary variable
d. Quadratic equation solving

## PROGRAMS USING SIMPLE STATEMENTS AND EXPRESSIONS

## EX: NO: 04 (a)

## INTEGER TO FLOAT CONVERSION

## AIM:

To write a c program to convert a value of one data type into another datâ type.

## ALGORITHM:

Step 1: Declare the necessary variables a and b as integer and float.
Step 2: Read the input of the integer a.
Step 3: Assign the value of the integer to a float variableand a double variable.
Step 3: Display the value of the float variableand the double variable.

## PROGRAM:

```
#include<stdio.h>
```

main()
\{
float b ;
int a;
printf("\nEnter ap Integer\n");
scanf("\%d", \&a);
$\mathrm{b}=($ float $) \mathrm{a}$;
printf("InThe Converted float value is \%f",b);
\}

## OUTPUT:

Enter an Integer
45
The Converted float value is 45.00000

## RESULT:

Thus the c program to convert the integer into float was written, entered, executed and the output was verified.

## PROGRAMS USING SIMPLE STATEMENTS AND EXPRESSIONS

## EX: NO: 04 (b)

## MULTIPLICATION OF TWO NUMBERS

AIM:
To write a c program to produce the Multiplication result of given two Numbers.

## ALGORITHM:

Step 1: Declare the necessary variables $\mathrm{a}, \mathrm{b}$ and c as integer.
Step 2: Read the input of the integer $a$ and $b$.
Step 3: Multiply a \& b and store the result in c
Step 3: Display the value of c

## PROGRAM:

\#include<stdio.h>
main()
\{
int a,b,c;
printf("Enter Number 1\n");
scanf("\%d",\&a);
printf("Enter Number $2 \mathrm{nn}^{\prime \prime}$ );
scanf("\%d",\&b);
$\mathrm{c}=\mathrm{a} * \mathrm{~b}$;
printf("\nThe Multiplication Result is \%d\n",c);
\}

## OUTPUT:

Enter Number 1
34
Enter Number 2
The Multiplication Result is 238

## RESULT:

Thus the c program to produce the Multiplication result of given two Numbers was written, entered, executed and the output was verified.

## PROGRAMS USING SIMPLE STATEMENTS AND EXPRESSIONS

## EX: NO: 04 (c)

## AVERAGE OF FIVE MARKS

## AIM:

To write a c program to calculate the Average of given five Numbers.

## ALGORITHM:

Step 1: Declare five integer variables to get the marks.
Step 2: Read the input of five marks and store them into integer ariables.
Step 3: Calculate the sum of five numbers.
Step 4: Divide the sum by 5.
Step 5: Display the Average

## PROGRAM:

\#include<stdio.h>
main()
\{
int m1,m2,m3,m4,m5,tot;
float avg;
printf("Enter 5 Marks\nn");
scanf("\%d\%d\%d\%d\%d",\&m1,\&m2,\&m3,\&m4,\&m5);
tot $=\mathrm{m} 1+\mathrm{m} 2+\mathrm{m} 3+\mathrm{m} 4+\mathrm{m} 5$;
avg=tot/5;
printf("lnThe Average is \%fln",avg);
\}

## OUTPUT:

Enter Number 1
34
Enter Number 2
The Multiplication Result is 238

## RESULT:

Thus the c program to calculate the Average of given five Numbers was written, entered, executed and the output was verified.

## PROGRAMS USING SIMPLE STATEMENTS AND EXPRESSIONS

EX: NO: 04 (d)

## EVALUATION OF AN EQUATION

## AIM:

To write a c program to evaluate the given Equation.

## ALGORITHM:

Step 1: Declare Necessary variables
Step 2: Read the input for Equation terms
Step 3: Calculate the value of Numerator
Step 4: Calculate the value of Denominator
Step 5: Divide the Numerator by Denominator
Step 6: Display the Result

## PROGRAM:

\#include<stdio.h> main()
\{
int v,g,c,d,dr;
float $\mathrm{r}, \mathrm{nr}$;
printf("Enter the value of v\n");
scanf("\%d",\& );
printf("Enter the value of $g \backslash n$ ");
scanf("\%d",\&g);
printf("Enter the value of $\mathrm{c} \backslash \mathrm{n}$ ");
scanf("\%d",\&c);
printf("Enter the value of $\mathrm{d} \backslash \mathrm{n} ")$;
scanf("\%d",\&d);
$\mathrm{nr}=(2 * \mathrm{v})+(6.22 * \mathrm{c} * \mathrm{~d})$;
$\mathrm{dr}=\mathrm{g}+\mathrm{v}$;
$\mathrm{r}=\mathrm{nr} / \mathrm{dr}$;
printf("The Evaluated Result is \%fln",r);
\}

## OUTPUT:

Enter the value of v
2
Enter the value of $g$
4
Enter the value of c
6
Enter the value of d
8
The Evaluated Result is 50.426666

PROGRAMS USING SIMPLE STATEMENTS AND EXPRESSIONS
EX: NO: 04 (e)

## MEASUREMENT CONVERSION

## AIM:

To write a c program to convert given millimeter measurement into meter

## ALGORITHM:

Step 1: Declare a variable to get Millimeter
Step 2: Read the input
Step 3: Multiply given input by 1000
Step 4: Display the Result

## PROGRAM:

\#include<stdio.h> main()
\{
int mm, m ;
printf("Enter the Wijlimeter\n");
scanf("\%d",\&min),
$\mathrm{m}=\mathrm{mm} * 100{ }^{*}$
printf("The Converted meter is \%d",m);
\}

## OUTPUT:

Enterthe Millimeter
12
The Converted meter is 12000

## RESULT:

Thus the c program to convert given millimeter measurement into meter was written, entered, executed and the output was verified.

## SCIENTIFIC PROBLEM SOLVING USING DECISION MAKING AND LOOPING

EX: NO: 05 (a)

## ODD OR EVEN

## AIM:

To write a c program to check whether given Number is odd or even.

## ALGORITHM:

Step 1: Declare a variable to get a Number
Step 2: Read the input
Step 3: Get the remainder of given number using m@dulo operator
Step 4: If remainder is 0 prints "Even Number", etse print "Odd Number".

## PROGRAM:

\#include<stdio.h>
main()
\{
int a,rem; printf("Enter a Numbern"); scanf("\%d",\&a); rem=a\%2;
if(rem==Q)
printf("The Given Number is Even");
else
printf("The Given Number is Odd");
\}
OUTPUT:
Enter a Number
'13
The Given Number is Odd

## RESULT:

Thus the c program to check whether given Number is odd or even was written, entered, executed and the output was verified.

## SCIENTIFIC PROBLEM SOLVING USING DECISION MAKING AND LOOPING

## EX: NO: 05 (b)

## BIGGEST OF 3 NUMBERS

## AIM:

To write a c program to examine the biggest of given three numbers

## ALGORITHM:

Step 1: Declare three integer variables
Step 2: Read the 3 inputs
Step 3: Compare first two numbers and go to Step4 ${ }^{6}$
Step 4: If first number is greater than second number then compare first number with third number else go to step 6

Step 5: If first number is greater than third number print first number as biggest number else print third number as biggest

Step 6: Compare second number with third number
Step 7: If second number is geêater than third number print second number as biggest number else print third number as biggest
PROGRAM:

```
#include<stdio.h>
main()
    {
                int a,b,c;
printf("Enter 3 Numbers\n");
scanf("%d%d%d",&a,&b,&c);
if(a>b)
    {
        if(a>c)
        {
        printf("The First Number %d(a) is Biggest\n",a);
        }
    }
    else if(b>c)
```

## OUTPUT:

Enter 3 Numbers
5
9
2
The Second Number 89(b) is Biggest

## SCIENTIFIC PROBLEM SOLVING USING DECISION MAKING AND LOOPING

EX: NO: 05 (c)

## SUM OF ' $\mathbf{N}$ ’ NATURAL NUMBERS

AIM:
To write a c program to find the sum of ' N ' natural numbers for given range.

## ALGORITHM:

Step 1: Initialize the sum as 0
Step 2: Read the range as input
Step 3: Initialize a counter with 1
Step 4: Overwrite the sum by adding counter alue \& sum
Step 5: Increment the counter value by 1
Step 6: Repeat the steps $4 \& 5$ until the cornter is less than or equal to range
Step 7: Print the sum

## PROGRAM:

\#include<stdio.h> main()
\{
int $\mathrm{i}, \mathrm{n}$, sum $=0$;
printf("Enter the rangeln");
scanf("Od",\&n);
$\mathrm{j}=1$.
while( $\mathrm{i}<=\mathrm{n}$ )
sum=sum+i;
i++;
\}
printf("\nThe sum of first \%d numbers is \%d\n",n,sum);
\}

## OUTPUT:

Enter the range
16
The sum of first 16 numbers is 136

## RESULT:

Thus the c program to find the sum of ' N ' natural numbers for given range was written, entered, executed and the output was verified.

## SCIENTIFIC PROBLEM SOLVING USING DECISION MAKING AND LOOPING

EX: NO: 05 (d)

## SUM OF DIGITS

## AIM:

To write a c program to find the sum of digits for a given number.

## ALGORITHM:

Step 1: Declare a integer variable and initialize the sum as $\oplus$
Step 2: Read the input
Step 3: Take the remainder of given number while dividing 10
Step 4: Overwrite the sum by adding above remainder with available sum
Step 5: Overwrite the number by divide with 10
Step 6: Repeat the steps 3 to 5 until the number is greater than 0
Step 7: Print the sum

## PROGRAM:

\#include<stdio.h> main() \{
int n,i,sum=0;
printf("Enter a Numberln");
scanf("\%d",\&n);
$\mathrm{i}=\mathrm{n} \% 10$;
sum=sum+i;
$\mathrm{n}=\mathrm{n} / 10$;
\}while( $\mathrm{n}>0$ );
printf("The Sum of digit is \%d\n",sum);
\}

## OUTPUT:

Enter a Number
5891
The Sum of digit is 23

## RESULT:

Thus the c program to find the sum of digits for a given number was written, entered, executed and the output was verified.

## SCIENTIFIC PROBLEM SOLVING USING DECISION MAKING AND LOOPING

EX: NO: 05 (e)

## EVALUATION OF SINE SERIES

## AIM:

To write a c program to evaluate the sine series.

## ALGORITHM:

Step 1: Get the input for number of terms
Step 2: Get the input for value of x
Step 3: Initialize a counter with 1
Step 4: Initialize a sign counter with positive, value of 1
Step 5: Initialize the sum as 0
Step 6: Calculate the power of $x$ arssigned to counter
Step 7: Multiply the aboveresult with sign counter and store as Numerator
Step 8: Calculate the factotial value of counter value as follows
a. Initiadize a loop counter to 1
b. Intialize the product to 1

Obtain the new product by multiplying counter value with old product
d. Increment the loop counter by 1
e. Repeat the steps $\mathrm{c} \& \mathrm{~d}$ until the loop counter is less than or equal to counter value
f. Store the product as denominator

Step 9: Divide Numerator by Denominator
Step 10: Obtain the sum by adding available sum with above division result
Step 11: Multiply the sign counter with -1

Step 12: Increment the counter value by 2
Step 13: Repeat the steps 6 to 12 until counter is less than or equal to range
Step 14: Print the sum

## PROGRAM:

\#include<stdio.h>
\#include<math.h>
int factorial(int n)
\{
int i,sum=1;
for $(\mathrm{i}=1 ; \mathrm{i}<=\mathrm{n} ; \mathrm{i}++$ )
sum=sum*i;
return sum;
\}
main()
\{
int i,n,j,dr;
float res $=0.0, \mathrm{x}, \mathrm{nr}$;

scanf("\%f",\&x);
printf("\nEnter the total no of terms\n");
scanf("\%d",\&n);
$\mathrm{j}=1$;
$\operatorname{for}(\mathrm{i}=1 ; \mathrm{i}<\mathrm{n} * 2 \cdot \mathrm{i}+=2)$
\{

$$
n y=\operatorname{pow}(x, i) * j ;
$$

$\mathrm{dr}=$ factorial(i);
res+=(nr/dr);
$\mathrm{j}=-\mathrm{j}$;
printf("The Result of sine series is : \%fln",res);

## OUTPUT:

Enter the Value of x
0.21

Enter the total no of terms
5
The Result of sine series is : 0.208460

## RESULT:

Thus the c program to find the sum of digits for a given number was written, entered, executed and the output was verified.

## SCIENTIFIC PROBLEM SOLVING USING DECISION MAKING AND LOOPING

EX: NO: 05 (f)

## ARITHMETIC CALCULATOR

AIM:
To write a menu driven c program to implement an Arithmetic Calcalator.

## ALGORITHM:

Step 1: Get the two numbers
Step 2: Enter the choice
Step 3: Pass the choice into switch case
Step 4: In case 1, add the two numbers and print the result
Step 5: In case 2, subtract the two numbers and print the result
Step 6: In case 3, multiply the two numbers and print the result
Step 7: In case 4, divide thetwo numbers and print the result

## PROGRAM:

\#include<stdio.h>
main()
pxintf("\nEnter the Number 1:\n");
scanf("\%d",\&a);
printf("\nEnter the Number 2: $\ln$ ");
scanf("\%d",\&b);
printf("\n1.Add\n2.Subtract\n3.Multiply\n4.Divideln");
printf("\nEnter the Choice:\n");
scanf("\%d",\&ch);
switch(ch)
\{
case 1:
$\mathrm{c}=\mathrm{a}+\mathrm{b}$;
printf("\n $\% d+\% d=\% d \backslash n ", a, b, c) ;$
break;
case 2 :
$c=a-b ;$
printf("\n \%d- \%d = \%d\n", a,b,c); break;
case 3:
$\mathrm{c}=\mathrm{a}^{*} \mathrm{~b} ;$
printf("\n \%d * \%d = \%d\n", a,b,c); break;
case 4:
$\mathrm{c}=\mathrm{a} / \mathrm{b}$;
printf("\n \%d / \%d = \%d\n",a,b,c)
break;
\}
\}

## OUTPUT:

Enter the Number 1:
15

Enter the Number 2:
56
1.Add
2.Subtract
3.Multiply
4.Divide

Enter the Choice:
2
$15-56=-41$

## RESULT:

Thus the menu driven c program to implement an Arithmetic Calculator was written, entered, executed and the output was verified.

## SCIENTIFIC PROBLEM SOLVING USING DECISION MAKING AND LOOPING

EX: NO: 05 (g)

## NUMBER CHECKING

## AIM:

To write a menu driven c program to check whether the given number is Palindrome, Armstrong and Prime.

## ALGORITHM:

Step 1: Get a number from the user
Step 2: Enter the choice
Step 3: Pass the choice into switch case
Step 4: In case 1,
a. Copy the given number into a variable
b. Initialize a counter to 1 and sum to 0
c. Extract theremainder of given number while dividing 10
d. Multiplo the sum by 10
e. Overwfite the sum by adding above remainder with

## avadable sum

f. Overwrite the number by divide with 10
g. Repeat the steps a to $f$ until the number is greater than 0
h. Compare the sum and copy of the number
i. If they are equal print as "Palindrome" else print "Not Palindrome"
a. Copy the given number into a variable
b. Initialize a counter to 1 and sum to 0
c. Extract the remainder of given number while dividing 10
d. Calculate the value of remainder by assigning power 3
e. Overwrite the sum by adding above result with available sum
f. Overwrite the number by divide with 10
g. Repeat the steps a to e until the number is greater than 0
h. Compare the sum and copy of the number
i. If they are equal print as "Armstrong" else print "Not Armstrong"

Step 6: In case 3,
a. Initialize a flag value with 5
b. Initialize a counter to 2
c. Extract the remainder of given number dividing with counter value
d. If the remainder is 0 changes the flag value to 0 and go to step $g$ else go to next step.
e. Increment the counter value by 1
f. Repeat the steps a to until counter is less than or equal to square root of the ojiven number
g. Check the flag, value
h. If flag value is 0 then print as "Prime Number" else print as "Not Prume"

## PROGRAM:

printf("\nEnter a Number\n");
scanf("\%d",\&a);
printf("\n1.Palindrome\n2.Armstrong\n3.Prime\n");
printf("\nEnter the Choice:\n");
scanf("\%d",\&ch);
switch(ch)
\{
case 1:

```
\(\mathrm{n}=\mathrm{a}\);
while ( \(\mathrm{a}>0\) )
\{
    \(\mathrm{i}=\mathrm{a} \% 10\);
    sum=(sum*10)+i;
    \(a=a / 10\);
\}
if(n==sum)
    printf("Given Number is Palindrome\n");
else
    printf("Given Number is Not Palindromeln");
break;
```

case 2 :
$\mathrm{n}=\mathrm{a}$;
do
\{
$\mathrm{i}=\mathrm{a} \% 10$;
sum=sum+(i*i*i); ;
$a=a / 10 ;$
\}while $(\mathrm{a}>0)$;
if(n==sum)
prinff("Given Number is Armstrong\n");
else
printf("Given Number is Not Armstrong\n");
break;
$\mathrm{m}=5$;
$\mathrm{n}=\mathrm{sqrt}(\mathrm{a})$;
for $(\mathrm{i}=2 ; \mathrm{i}<=\mathrm{n} ; \mathrm{i}++$ )
\{
if $(a \% i==0)$
\{
$\mathrm{m}=0$;
break;
\}
\}
if( $\mathrm{m}==0$ )
printf("Given Number is Primeln");
else
break;

```
    }
}
```

## OUTPUT:

Enter a Number
121
1.Palindrome
2.Armstrong
3.Prime

Enter the Choice:
1
Given Number is Palindrome

## RESULT:

Thus the menu driven c program to check whether the given number is Palindrome, Armstrong and Prime was written, entered, executed and the output was verified.

## SIMPLE PROGRAMMING FOR ONE DIMENSIONAL AND TWO DIMENSIONAL ARRAYS

EX: NO: 06 (a)

## SUM OF ARRAY ELEMENTS

AIM:
To write a c program to find the sum of given array elements.

## ALGORITHM:

Step 1: Declare an array with necessary size
Step 2: Get the value for total number of elements
Step 3: Initialize an index value to 0
Step 4: Read the input
Step 5: Increment the index value by
Step 6: Repeat steps $4 \& 5$ until oounter less than total no. of elements
Step 7: Initialize an index qatue to 0 and sum to 0
Step 8: Obtain the sumbyadding current index array value with available Sum
Step 9: Increment the index value by 1
Step 10: Repeatsteps 8 \& 9 until index value less than total no. of elements
Step 11: Print the sum

## PROGRAM:

\#include<stdio.h>
main()
\{
int i,n,a[10],sum=0;
printf("Enter total no. of Elements\n");
scanf("\%d",\&n);

```
printf("Enter Array elements one by one\n");
for(i=0;i<n;i++)
            scanf("%d",&a[i]);
for(i=0;i<n;i++)
    sum=sum+a[i];
printf("The Sum of Array Elements is %d\n",sum);
```

\}

## OUTPUT:

Enter total no. of Elements
8
Enter Array elements one by one
15
69
32
10
45
66
32
11
The Sum of Array Elements is 280

## RESULT:

Thus the menu driven c program to find the sum of given array elements was written, entered, executed and the output was verified.

## SIMPLE PROGRAMMING FOR ONE DIMENSIONAL AND TWO DIMENSIONAL ARRAYS

EX: NO: 06 (b)

## DISPLAY EVEN NUMBERS OF AN ARRAY

AIM:
To write a c program to print the even numbers of given array elements.

## ALGORITHM:

Step 1: Declare an array with necessary size
Step 2: Get the value for total number of elements
Step 3: Initialize an index value to 0
Step 4: Read the input
Step 5: Increment the index value by 1
Step 6: Repeat steps $4 \& 5$ until counter less than total no. of elements
Step 7: Initialize an index alue to 0
Step 8: Extract the remainder by dividing array index value with 2
Step 9: If the remainder is 0 print the value
Step 10: Increment the index value by 1
Step 11.Repeat steps 8 to 10 until index value less than total no. of elements

## PROGRAM:

```
main()
    \{
        int i,n,a[10];
        printf("Enter total no. of Elements\n");
        scanf("\%d",\&n);
        printf("Enter Array elements one by one\n");
```

```
        for(i=0;i<n;i++)
            scanf("%d",&a[i]);
        printf("The even numbers of given array:\n");
        for(i=0;i<n;i++)
        {
        if(a[i]%2==0)
        printf("%d\n",a[i]);
    }
}
```

## OUTPUT:

Enter total no. of Elements
6
Enter Array elements one by one 98
11
35
61
22
14
The even numbers of given apray:
98
22
14

## RESULT:

Thus the menu driven c program to print the even numbers of given array elements was written, entered, executed and the output was verified.

## SIMPLE PROGRAMMING FOR ONE DIMENSIONAL AND TWO DIMENSIONAL ARRAYS

EX: NO: 06 (c)

## MULTIPLICATION OF 2*2 MATRIXES

AIM:
To write a c program to perform $2 * 2$ matrixes multiplication.

## ALGORITHM:

Step 1: Start
Step 2: Declare the two dimensional integer arrays a[2] 2 , $\mathrm{b}[2][2]$ and $\mathrm{c}[2][2]$ and declare the variables $\mathrm{k}, \mathrm{I}$ and j as integers

Step 3: Read the input for the matrixes A and B
Step 4: Print the matrixes A and B.
Step 5: Multiply the matrixes A and Band print the result in a matrix C.
Step 6: Stop

## OUTPUT:

Enter the value of the first matrix:

| 2 | 3 |
| :--- | :--- |
| 3 | 4 |

Enter the value of the second matrix:

Product of the two matrices is
23
32

## RESULT:

Thus the c program to perform $2 * 2$ matrixes multiplication was written, entered, executed and the output was verified.

## SOLVING PROBLEMS USING STRING FUNCTIONS

EX: NO: 07 (a)

## STRING PALINDROME CHECKING

## AIM:

To write a c program to check whether the given string is palindrome or not

## ALGORITHM:

Step 1: Create a character array with necessary size
Step 2: Read the String
Step 3: Copy the String into another character array
Step 4: Get reverse string of input by using strrev function
Step 5: Compare the above result with copied string
Step 6: If two string s are same print "Palindrome" else print "Not Palindrome"

## PROGRAM:

\#include<stdio.h>
\#include<string.h>
main()
\{
char s[20],s1[20];
printf("Enter a Stringtn);
scanf("\%s",s);
strcpy(s1,s);
if $(\operatorname{strcmp}(\mathrm{s}, \mathrm{S} 1)=0)$ printf("Fhe Given String is Palindromeln");
else
printf("The Given String is Not Palindrome\n");
\}

## OUTPUT:

Enter a String
madam
The Given String is Palindrome

## RESULT:

Thus the c program to check whether the given string is palindrome or not was written, entered, executed and the output was verified.

## SOLVING PROBLEMS USING STRING FUNCTIONS

EX: NO: 07 (b)

## STRING CONCATENATION

## AIM:

To write a c program to find the length of given two strings and concatentite them

## ALGORITHM:

Step 1: Create two character arrays with necessary size
Step 2: Read the Strings
Step 3: Calculate the string lengths using strlen funetion
Step 4: Print the string lengths
Step 5: Join the two strings using strcat fünction
Step 6: Print the concatenated string

## PROGRAM:

\#include<stdio.h> \#include<string.h>
main()
scanf("\%s",s1);
strcat(s,s1);
printf("The Concatenated String is \%s\n",s);
\}

## OUTPUT:

## Enter a String1

hai
Enter a String2
hello
The Concatenated String is haihello

## PROGRAMS WITH USER DEFINED FUNCTIONS

## EX: NO: 08 (a)

## FUNCTIONS WITHOUT ARGUMENTS \& RETURN TYPE

## AIM:

To write a c program to check whether the given year is leap or not using functions.

## ALGORITHM:

Step 1: Create a function isleap()
Step 2: Inside the function
a. Read the year as input
b. Extract the remainder from division operation of year by 4
c. If remainder is 0 print "Gixén year is Leap year" else print "Given year is not a Keap year"

Step 3: Inside the main function call the isleap() function

## PROGRAM:

\#include<stdio.h> void isleap()
int yr;
priatf("Enter a Year\n");
scanf("\%d",\&yr);

$$
\text { if }(y r \% 4==0)
$$

else printf("Given Year is Not a Leap year");
\}
main()
\{
isleap();
\}

## OUTPUT:

Enter a Year
1965
Given Year is Not a Leap year

## RESULT:

Thus the c program to check whether the given year is leap or not using functions was written, entered, executed and the output was verified.

## PROGRAMS WITH USER DEFINED FUNCTIONS

EX: NO: 08 (b)

## FUNCTIONS WITHOUT ARGUMENTS \& WITH RETURN TYPE

AIM:
To write a c program to calculate the area of triangle using functions.

## ALGORITHM:

Step 1: Create a function area()
Step 2: Inside the function
a. Read the 3 sides of triangle
b. Calculate the sum of 3 sides
c. Divide the sum by 2 and store itinto $s$
d. Subtract the sides from sând store them into variables
e. Multiply s with aboye 3 results
f. Take the square root of above result
g. Return the above result as area

Step 3: Inside the main function call the function area()
Step 4: Print the area by obtaining the return value of area()

## PROGRAM:

```
#includesstdio.h>
#include<math.h>
floatarea()
    int a,b,c;
    float s,ar;
    printf("Enter 3 Sides\n");
    scanf("%d%d%d",&a,&b,&c);
    s=(a+b+c)/2;
    ar=sqrt(s*(s-a)*(s-b)*(s-c));
    return ar;
    }
```

main()
\{
float a ;
a=area();
printf("The Area of Triangle is \%fln",a);
\}

## OUTPUT:

Enter 3 Sides
12
8
7
The Area of Triangle is 19.748418

## RESULT:

Thus the c program to calculate the area of triangle using functions was written, entered, executed and the output was verified.

## PROGRAMS WITH USER DEFINED FUNCTIONS

## EX: NO: 08 (c)

## FUNCTIONS WITH ARGUMENTS \& WITHOUT RETURN TYPE

AIM:
To write a c program to sort the given array of elements using functions.

## ALGORITHM:

Step 1: Create a function sort()
Step 2: Inside the function
a. Initialize a index to 0
b. Initialize the sub index to counteety
c. Compare the two numbers which are available in array index value and array sub index̀ value
d. If the first number is greater than second number swap them
e. Increment the submidex by 1
f. Repeat the steps doto e until sub index less than total number of elements
g. Increment the index by 1
h. Repeat the steps b to $g$ until sub index less than total number of etements
i. Print the array elements

Step 3: Inside the main function
a. Create an integer array with necessary size
b. Get the total number of elements
c. Read the array elements one by one
d. Call the sort() function by passing array and no. of elements as arguments

## PROGRAM:

\#include<stdio.h>
void sorting(int a[],int n)
\{

> int i,j,t;
for $(\mathrm{i}=0 ; \mathrm{i}<\mathrm{n}-1 ; \mathrm{i}++$ )
\{

$$
\begin{aligned}
& \text { for }(\mathrm{j}=\mathrm{i}+1 ; \mathrm{j}<\mathrm{n} ; \mathrm{j}++) \\
& \left\{\begin{array}{r}
\mathrm{if}(\mathrm{a}[\mathrm{i}]>a[\mathrm{j}])
\end{array}\right.
\end{aligned}
$$

\{
$\mathrm{t}=\mathrm{a}[\mathrm{i}]$;
$\mathrm{a}[\mathrm{i}]=\mathrm{a}[\mathrm{j}]$;
$\mathrm{a}[\mathrm{j}]=\mathrm{t}$;
\}
\}
\}
printf("Array Elemets before sorting\n");
for $(\mathrm{i}=0 ; \mathrm{i}<\mathrm{n} ; \mathrm{i}++$ )
printf("\%d\t",a[i]);
\}
main()
\{
int $\mathrm{i}, \mathrm{a}[10], \mathrm{n}$; printf("Enter total no. 㫙elements\n"); scanf("\%d",\&n); printf("Enter Array Elements one by one\n"); for $(\mathrm{i}=0 ; \mathrm{i}<\mathrm{n} ; \mathrm{i}+\boldsymbol{-})$ scanf("\%d",\&a[i]);
printf("Array Elemets before sorting $\backslash \mathrm{n} ")$;
for $(\mathrm{i}=0 ; \mathrm{i}<\mathrm{n} ; \mathrm{i}++)$
printf("\%d\t", a[i]);
printf("\n");
Sorting(a,n);

## OUTPUT:

Enter total no. of elements
6
Enter Array Elements one by one
21
2

9
45
30
11
Array Elemets before sorting
$\begin{array}{llllll}21 & 2 & 9 & 45 & 30 & 11\end{array}$
Array Elemets before sorting
$\begin{array}{llllll}2 & 9 & 11 & 21 & 30 & 45\end{array}$

## RESULT:

Thus the c program to sort the given array of elements using functions was written, entered, executed and the output was verified.

## PROGRAMS WITH USER DEFINED FUNCTIONS

## EX: NO: 08 (d)

## FUNCTIONS WITH ARGUMENTS \& RETURN TYPE

## AIM:

To write a c program to find the smallest element of given array of eletments using functions.

## ALGORITHM:

Step 1: Create a function small()
Step 2: Inside the function
a. Store the $0^{\text {th }}$ index value into bas $($
b. Initialize a index to 1
c. Compare the array index value with base
d. If the array index valle tis smaller than base store the array index value into base
e. Increment the index by 1
f. Repeat the Steps c \& e until index reaches total no. of elements.
g. Returnthe base value

Step 3: Inside the main function
a Create an integer array with necessary size
b. Get the total number of elements
c. Read the array elements one by one
d. Call the small() function by passing array and no. of elements as arguments

## PROGRAM:

\#include<stdio.h> int small(int a[],int n)
\{
int s,i;
$\mathrm{s}=\mathrm{a}[0]$;
for( $\mathrm{i}=0 ; \mathrm{i}<\mathrm{n} ; \mathrm{i}++$ )

```
    {
        if(a[i]<s)
        s=a[i];
        }
        return s;
    }
    main()
    {
        int i,a[10],n,s;
        printf("Enter total no. of elements\n");
        scanf("%d",&n);
        printf("Enter Array Elements one by one\n");
        for(i=0;i<n;i++)
        scanf("%d",&a[i]);
    printf("Array Elemets:\n");
    for(i=0;i<n;i++)
        printf("%d\t",a[i]);
        printf("\n");
        s=small(a,n);
        printf("The Smallest element of given array is %d",s);
    }
```

## OUTPUT:

Enter total no. of elements
5
Enter Array Elements one by one
1
98
2
66
0 ©
Array Elemets:
$\begin{array}{llll}98 & 2 & 66 & 0\end{array}$
The Smallest element of given array is 0

## RESULT:

Thus the c program to find the smallest element of given array of elements using functions was written, entered, executed and the output was verified.

## PROGRAM USING RECURSIVE FUNCTION

EX: NO: 09 (a)

## FACTORIAL OF A NUMBER

## AIM:

To write a c program to calculate the factorial of a given number

## ALGORITHM:

Step 1: Get the number
Step 2: Call the function fact by passing number as an argument
Step 3: Inside the fact()
a. If the received value is 0 or 1 han return 1
b. If the received value is not equal to 0 or 1 Multiply the value with return value of fact by passing value -1 as an argument
c. Return the above result

Step 4: Print the result by receiving the return value of fact()

## PROGRAM:

```
#include<stdio.h>
```

int factorial(int n)
\{

$$
\mathfrak{i f ( n = = 0 \| n = = 1 )}
$$

return 1;
return n *factorial(n-1);
main()
\{
int n ;
printf("\nEnter a Number\n");
scanf("\%d",\&n);
printf("\nThe factorial of \%d is \%d\n",n,factorial(n));

## \}

## OUTPUT:

Enter a Number
6
The factorial of 6 is 720

## RESULT:

Thus the c program to calculate the factorial of a given number was written, entered, executed and the output was verified.

## PROGRAM USING RECURSIVE FUNCTION

EX: NO: 09 (b)

## SUM OF DIGITS

## AIM:

To write a c program to find the sum of digits of a given number

## ALGORITHM:

Step 1: Get the number
Step 2: Call the function sum by passing number as an argument
Step 3: Inside the sum()
a. If the received value is less than) 1Oreturn that value
b. If the received value is greater than 10
c. Extract the remainder $\theta$ fabove value by dividing 10
d. Add the remainder with return value of sum by passing value/10 as an argument

Step 4: Print the result by receiving the return value of sum()

## PROGRAM:

int $\mathrm{n}, \mathrm{s}=0$; printf("\nEnter a Number\n");
scanf("\%d",\&n);
$\mathrm{s}=\operatorname{sum}(\mathrm{n}, \mathrm{s})$;
printf("\nThe sum of digits \%d is \%d\n",n,sum(n,s));
\}

## OUTPUT:

Enter a Number
46612
The sum of digits 46612 is 19

## RESULT:

Thus the c program to find the sum of digits of a given number was written, entered, executed and the output was verified

## PROGRAM USING STRUCTURES AND UNIONS

EX:NO: 10 (a)

## STUDENT RECORD

AIM:
To write a c program to maintain the student record using structures.

## ALGORITHM:

Step 1: Create a structure student with roll no, name, dept and 3 marks as fields

Step 2: Create a structure variable
Step 3: Read the input for student details
Step 4: Calculate the average of student by using 3 marks
Step 5: Print the structure elements using structure variable

## PROGRAM:

\#include<stdio.h> struct student
float avg;
char name[20], dept[10];
\}; main() \{
struct student s;
printf("Enter the Student Details:\n");
printf("Enter the Stuent roll no:\n");
scanf("\%d",\&s.rno);
printf("Enter the Stuent Name:\n");
scanf("\%s",\&s.name);
printf("Enter the Stuent Dept:\n");
scanf("\%s",\&s.dept);
printf("Enter the 3 marks: $\backslash n ")$;
scanf("\%d\%d\%d",\&s.m1,\&s.m2,\&s.m3);
$\mathrm{s} . \mathrm{avg}=(\mathrm{s} . \mathrm{m} 1+\mathrm{s} . \mathrm{m} 2+\mathrm{s} . \mathrm{m} 3) / 3 ;$
printf("The Student Average is :\%f\n",s.avg);
\}

## OUTPUT:

Enter the Student Details:
Enter the Stuent roll no:
12
Enter the Stuent Name:
Kumar
Enter the Stuent Dept:
CSE
Enter the Stuent marks:
40
18
90

## RESULT:

Thus the c program to maintain the student record using structures was written, entered, executed and the output was verified.

## PROGRAM USING STRUCTURES AND UNIONS

EX:NO: 10 (b)

## ARRAY OF STRUCTURES

## AIM:

To write a c program to maintain various number of students record using array of structures.

## ALGORITHM:

Step 1: Create a structure student with roll no, name, dept and 3 marks as fields

Step 2: Create a structure variable with necessary size
Step 3: Read the total number of students
Step 3: Read the structure details for all students
Step 4: Calculate the average of students by using 3 marks
Step 5: Write a function to print the student details if roll no. is given
Step 6: Inside the function
a. Initialize the index to 0
b. Compare the roll no. with structure index roll no.
c. If they are same print the student details
d. Increment the index by 1
e. Repeat the steps $b$ to $d$ until index reaches the total no. of students

## PROGRAM:

\#include<stdio.h>
struct student
\{
int rno,m1,m2,m3;
float avg;
char name[20],dept[10];
\};
void find_student(int a,struct student s[],int n)
\{
int i ;
printf("The Student Detail of \%d\n", a);
for $(\mathrm{i}=0 ; \mathrm{i}<\mathrm{n} ; \mathrm{i}++$ )
\{ if $(\mathrm{s}[\mathrm{i}] \cdot \mathrm{rno}==\mathrm{a})$
$\{$

printf("\%s\t\%s\t\%d\t\%d\t\%d\t\%f\n",s[i].name,s[i].dept,s[i].m1,s[i].m 2,s[ikm3,s[i].avg);
break; \}
\}
\}
main()
\{ int i,n,rno;
struct student s[10];
printf("Enter total no. of Students'n");
scanf("\%d",\&n);
for $(\mathrm{i}=0 ; \mathrm{i}<\mathrm{n} ; \mathrm{i}++$ )
\{
printf("Enter the Student \%d Details: ${ }^{\text {n " }}$,(i+1));
printf("Enter the roll no: $\mathrm{nn}^{\prime}$ );
scanf( $\left.{ }^{\prime} \% \mathrm{~d}^{\prime}, \& \mathrm{~s}[\mathrm{i}] . \mathrm{rno}\right)$;
printf("Enter the Name:\n");
scanf("\%s",\&s[i].name);
printf("Enter the Dept:\n");
scanf("\%s",\&s[i].dept);
printf("Enter the 3 marks: $\backslash n ")$;
scanf("\%d\%d\%d",\&s[i].m1,\&s[i].m2,\&s[i].m3);
$\mathrm{s}[\mathrm{i}] \cdot \mathrm{avg}=(\mathrm{s}[\mathrm{i}] \cdot \mathrm{m} 1+\mathrm{s}[\mathrm{i}] \cdot \mathrm{m} 2+\mathrm{s}[\mathrm{i}] \cdot \mathrm{m} 3) / 3$;
\}
printf("Enter the rollno to find: $\backslash n "$ ");
scanf("\%d",\&rno);
find_student(rno,s,n);

## OUTPUT:

Enter total no. of Students
2
Enter the Student 1 Details:
Enter the roll no:
12
Enter the Name:
Kumar
Enter the Dept:
cse
Enter the 3 marks:
45
67
88
Enter the Student 2 Details:
Enter the roll no:
13
Enter the Name:
Prabhu
Enter the Dept:
cse
Enter the 3 marks:
77
89
67
Enter the rollno to find:
13
The Student Detail of 13
$\begin{array}{lllll}\text { Prabhy cse } & 77 & 89 & 67 & 77.000000\end{array}$

## RESULT:

Thus the c program to maintain various number of students record using array of structures was written, entered, executed and the output was verified.

## PROGRAM USING STRUCTURES AND UNIONS

EX: NO: 10 (c)

## PROGRAM FOR SIZE OF UNION

AIM:
To write a c program to store the book information using union.

## ALGORITHM:

Step 1: Create an union book
Step 2: Declare one integer and a character array inside the union for book name and book price

Step 3: Get the book name and price
Step 4: Print the book name and price
Step 5: Get the Book name alone
Step 6: Print the Book name
Step 7: Get the Book Price
Step 8: Print the Book price

## PROGRAM:

\#includesstdio.h>
unionbook
int price;
char bname[20];
\};
main()
\{
union book b; printf("Enter the Book Details: $\ln$ ");
printf("Enter the Book Name:\n");
scanf("\%s",\&b.bname);
printf("Enter the Book Price:\n");
scanf("\%d",\&b.price);
printf("BOOK DETAILS:\n");
printf("\%slt\%d\n",b.bname,b.price);
printf("Enter the Book Name: $\ln ")$;
scanf("\%s",b.bname);
printf("Book Name=\%s\n",b.bname);
\}

## OUTPUT:

Enter the Book Details:
Enter the Book Name:
English
Enter the Book Price:
150
BOOK DETAILS:
û 150
Enter the Book Name:
English
Book Name=English

## RESULT:

Thus the c program to store the book information using union was written, entered, executed and the output was verified.
